

Create Node-RED Service

Node-RED was created successfully

The screenshot displays the Node-RED web interface. At the top, a black header bar contains the Node-RED logo, a status message "Lost connection to server, reconnecting...", and a "Deploy" button. Below the header, the interface is divided into three main sections. On the left is a sidebar with a search bar labeled "filter nodes" and two categories of nodes: "common" (including inject, debug, complete, catch, status, link in, link call, link out, and comment) and "function" (including function, switch, change, range, and template). The central workspace, titled "Flow 1", features a light gray grid background. A flow is visible, starting with a blue "inject" node containing the text "Hello Node-RED!". A wire connects this node to a green "msg.payload" node. On the right side, a "debug" console is open, showing a log entry for the date "17/11/2022, 17:19:49" from node "12f2649a.0d0d98". The log entry details the message: "msg.payload : string[15]" and the output: "Hello Node-RED!".
